

NOTRE VISION

Sharp eye surfboards has filled a gap in the surfboard market with an unprecedented commitment to consistency, quality, and customer service since 1992.

From the beginning, founder Marcio Zouvi has had the vision of creating a company that would gain a reputation not only for its excellence in quality, but also for providing the best customer service possible.

We have partnered exclusively with top suppliers in the market to obtain the best materials possible and are constantly investing in the development and testing new construction methods so our customers will always receive cutting edge surfboard technology.

As we venture into what some might say an uncertain future for surfboard manufacturing in the USA, we are proud to state that all our boards are 100% US-made by expert craftsmen with over one hundred years combined experience in the industry.

It is the combination of service, skill, and innovation that makes Sharp Eye the company it is today, and we won't change that for any reason.

DESIGN/TECHNOLOGY

Sharp Eye is the first in California to adopt the SURFCAD System to its production line. As the most advanced system in the industry, SURFCAD utilizes state-of-the-art software and computer numerical control machinery.

The software allows the shaper to create the entire design on screen. Rocker, outline, rails, and concaves are all built according to the shaper's concept.

The machinery pre-cuts blanks with incredible accuracy and resolution, leaving only the job of fine tuning to the shaper.

As the owner of both the software and machinery, Sharp Eye has leaped to a complete in-house production, controlling all phases of the production.

Every single surfboard made by us, either custom or stock, has an ID number, which is stored digitally.

This ID number offers the customer the unique advantage of ordering the exact same board, or to add some changes to it, if desired.

The system offers enormous benefits and unlimited possibilities in surfboard design.

I encourage you to check out the difference in one of our dealers !

NEW
DESIGN 2007 !

SB-6
NEW DESIGN FOR 2007 !
Created for the most beach break conditions this design allows easy rail to rail maneuvers and smooth transitions without loss of speed. Tested by our team with great feedback. Top WQS surfer used it in 2006. Available in squash, swallow and round tails.

SBT-S

NEW DESIGN FOR 2007 !

This design was created using the same rocker and forward foil as off the SBT model. It has deep single concave. We changed the outline for a more fuller version, similar than the GL-1. It has an incredible speed and looseness. Should be ordered 2 to 4 inches shorter than your normal board and 1/2 to 1 inch wider. Available in squash, swallow and round tails.

Glider GL-1 & 2

Recommended size range : 5'0" - 6'8"

The glider is one of our top small wave designs. It has a wider 1980's outline combined with a low entry rocker and a triple concave bottom. Fast and maneuverable for those small summer days. Should be ordered 2 to 4 inches shorter than your normal board and 1/2 to 1 inch wider. Available in squash and round tails.

GLIDERS GL-2

We kept the same overall characteristics as the GL-1 and changed the outline to a swallow tail without a hip.

Glider GL-3

Updated for 2007, it has the same magic rocker as the GL-1. The bottom is a single to a double concave of the tail. The wide nose allows the surfer to catch waves more easily and creates more stability for those who are learning how to surf. Also available in the double wing swallow format.

Sting Fish SF-1

Recommended size range : 5'0" - 6'8"

The SF-1 was updated and it flies ! It's low entry rocker, associated with a double concave and vee off the tail, creates this incredibly fast board and highly maneuverable board. It will still hold well in up to head high surf by adding bigger fins. The SF should be ordered 2 to 4 inches shorter than your normal board and 1/2 to 1 inch wider.

Twin Fin PIG TFF

Recommended size range : 5'0" - 6'6"

Designed for very small surfing conditions. It became popular as everybody went for extremes on fish designs. It has a very flat rocker with Bonzer, vee combo at the tail section. A twin fin set up with a trailer fin results in a very loose board with a good drive. It should be ordered 3 to 5 inches shorter than your normal board and 1/2 to 1 inch wider.

Mini Fun MF

Recommended size range : 5'0" - 6'4"

It is just a egg shape for the boys end girls learning to surf or for the good surfer that wants something else for those small summer days.

Available in round tail only.

Fun Board Performance FB

Recommended size range : 6'6" - 8'0"

The design is the link between short and long boards. It has similar characteristics as the Big Guy Performance Model, having more template area and fullers rails. The rocker still allows you to ride it as a short board. It has a reverse Vee, double concave combo. Available in squash, round and swallow tails.

Big Guy Performance BG

Recommended size range : 6'6" - 8'0"

This is an extended version of our shortboard. Designed for the big guy who needs the extra volume and width. It is an excellent paddler and still rides like a shortboard. Suggested width is : 19 to 22 inches. It's also available with the same tail options as SB-1.

SB-1 & 2

Recommended size range : 5'1" - 6'6" REDESIGNED FOR 2007 !

New! Redesigned for 2007, the SB-1's new rocker will push performance surfing to the highest level. It has a moderate nose entry with an extreme tail rocker, subtle single concave and low boxy rails. Designed for experienced surfers. Available in squash, swallow and round tails.

SB-2 Created for all around surf. This board has a more continuous rocker with a triple concave combo. The deck is less domed with boxier rails. Speed and drive, the perfect combination for the most progressive performance. It come with the same tails options as the SB-1.

SB-X

NEW DESIGN FOR 2007 !

This is the first design of the «X» series. The low nose entry rocker, high tail exit, forward thickness, flatter deck and deeper triple concave are the main features of this board. Designed for experienced surfers that like to drive of the back foot and to go vertical. Available in squash, swallow or round tails.

SB-T Tipton Model

REFINED FOR 2007

This board was first created for the tall, experienced surfer. It has the most extreme rocker of all shortboards and a very distinct forward volume. The results so far are incredible. It is fast and feels underfoot. We also tried it in smaller versions for some of our team riders, and everyone was stoked.

SEMI GUN

Recommended size range : 7'4"

It was developed targeting large and hollow surf. The bottom is equipped with a reverse vee, double concave combo. It has a solid control and yet loose in the pocket. Available in round pin, round tail or baby swallow.

GUN

For hawaii and big California surf. It was designed in two models, the G1 and G2.

G1 - RECOMMENDED SIZE RANGE : 7'0" - 8'6"

For waves extremely hollow such as Pipe or Puerto. The rocker is continuous with more nose entry. The bottom is equipped with a reverse vee, double concave combo.

G2 - RECOMMENDED SIZE RANGE : 7'0" - 10'0"

For large waves such as Sunset. A vee bottom running smoothly through the last half of the board. The outline is a bit wider and the widest point was moved up a little.
